OCE-M77- //3

Chief, Procurement Division, OL

-16 May 1977

25X1A

[redacted]  
Chief, Communications Engineering

Request for Bid Solicitation for A Remote  
Data Terminal (RDT)

1. The Remote Data Terminal, functionally specified in Attachment C, will be installed in an OSO field site to provide an automated data terminal and handling capability. Principally, the operation of the field site is dependent upon a communication capability to transmit and receive information in real-time error-free mode. The implemented RDT will provide the required capability and will reduce maintenance and support costs as a result of equipment commonality with on-site installed equipment.

2. It is requested that action be taken to solicit a technical proposal and a firm fixed price quotation for the RDT from each of the vendors listed in Attachment A. The association of the vendors with the Agency is classified Confidential. Therefore, [redacted] contract should be considered for this procurement.

3. All proposals received as a result of the solicitation are to be evaluated by Communications Engineering prior to award of contract. The evaluation procedures, which will be used to determine the most technically qualified vendor, are outlined in Attachment B, Specific Instructions.
